

Science is Fun

By

Sayar Ko Ko Lwin

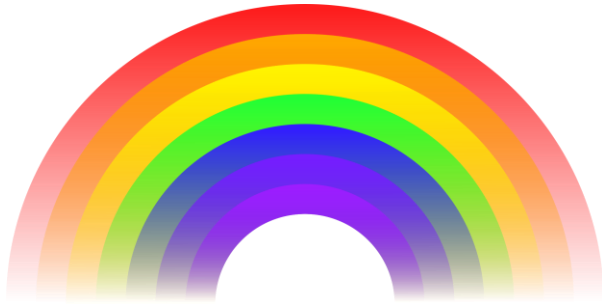

The Sun

The sun is big and bright. It gives us light and heat. We see the sun in the day. Plants need the sun to grow. I like sunny days!

The Moon

The moon shines at night. Sometimes it is round, sometimes it is small. The moon has no light of its own. It reflects the sun's light. I like to look at the moon.

Rainbows

A rainbow has seven colors. We see it when the sun shines after rain. The colors are red, orange, yellow, green, blue, indigo, and violet. Rainbows are beautiful!

Water

Water is very important. We drink water to stay healthy. Plants and animals also need water. Water can be liquid, ice, or steam. I drink water every day.

Plants

Plants grow from seeds. They need water, sunlight, and air. Plants give us fruits and flowers. Trees give us shade. I water my plants every day.

Animals

Animals are living things.
Some animals live on land.
Some live in water. Dogs, cats,
and birds are animals. I love
animals!

The Wind

Wind is moving air. We cannot see the wind, but we can feel it. Wind makes kites fly. Strong wind is called a storm. I like flying kites in the wind.

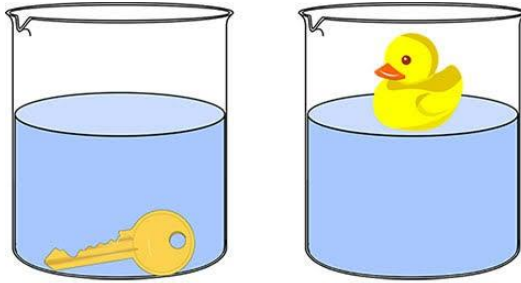

Stars

Stars twinkle at night. They are very far away. The sun is also a star. We see many stars in the sky. I like counting stars!

The Earth

We live on Earth. Earth is round like a ball. It has land and water. Earth moves around the sun. We must keep Earth clean.

Floating and Sinking

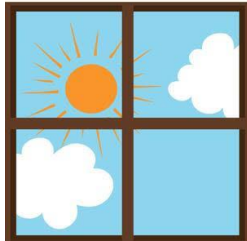

Some things float on water.
Some things sink. A leaf floats,
but a stone sinks. I like testing
which things float!

The Sky

The sky is blue in the daytime. At night, it becomes dark. Sometimes, we see clouds in the sky. Airplanes fly in the sky. I love looking at the sky!

day

night

Day and Night

Daytime is when the sun is up. Nighttime is when the moon is out. The Earth spins to make day and night. I sleep at night and play in the day.

Shadows

Shadows are dark shapes. They form when light is blocked. My shadow follows me in the sun. It gets big and small. Shadows are fun to play with!

cold

hot

Hot and Cold

Fire is hot. Ice is cold. We wear warm clothes in winter. We eat ice cream in summer. I like to feel different temperatures!

Magnets

Magnets can pull some metals. They have two ends: North and South. Magnets can stick to the fridge. I like playing with magnets!

The Human Body

I have two eyes, two ears, and one nose. My heart beats inside my chest. I use my hands to hold things. I use my legs to run. My body is amazing!

Sound

Sound comes from vibrations. Dogs bark, cats meow, and birds sing. Loud sounds hurt my ears. I like listening to music!

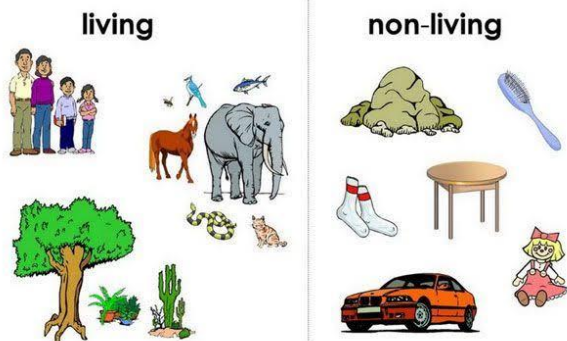

Light

Light helps us see. The sun gives natural light. Lamps give us light at night. Some animals glow in the dark!

Seasons

There are four seasons: summer, rainy, winter, and spring. Summer is hot. Winter is cold. Trees lose leaves in winter. Flowers bloom in spring.

Living and Non-Living Things

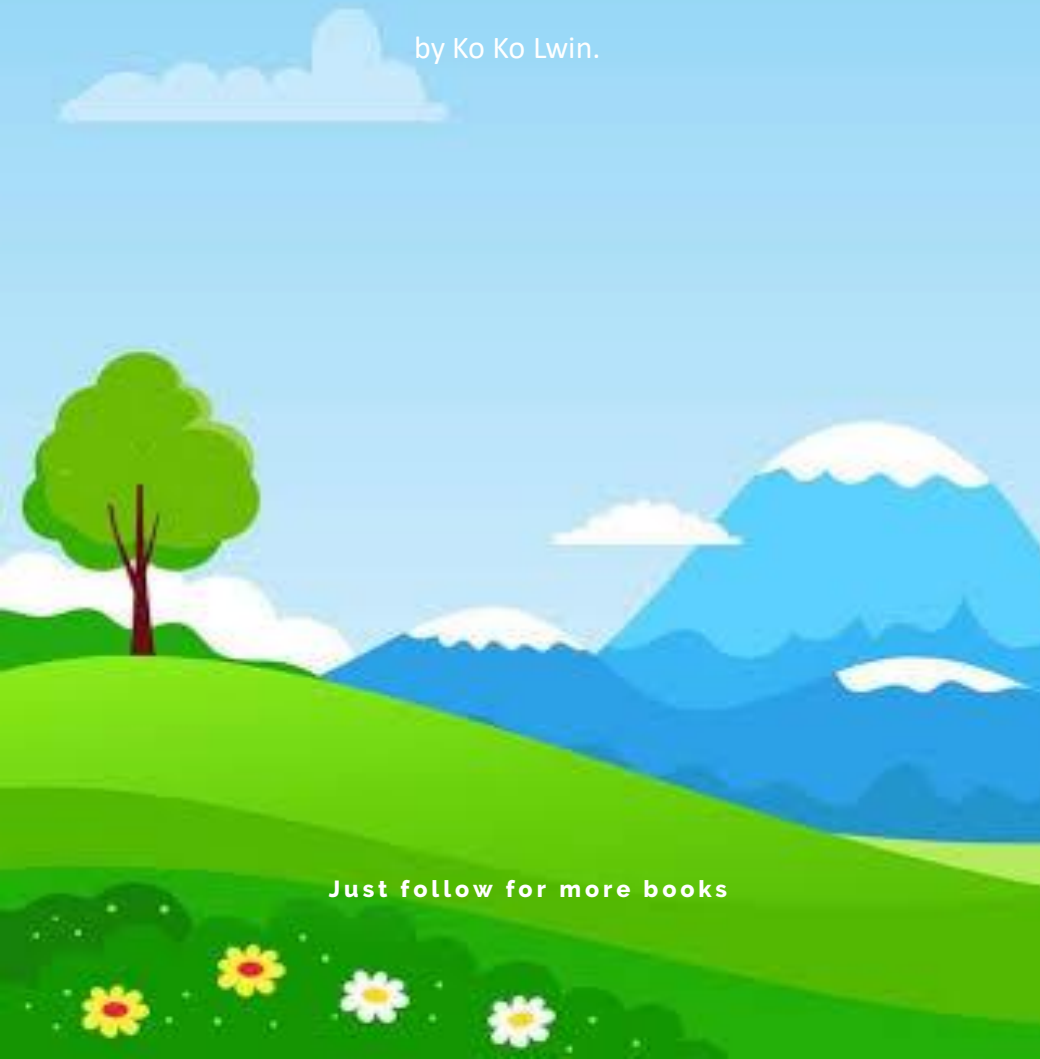

Living things grow and move. People, animals, and plants are alive. Rocks and toys are not alive. I am a living thing!

The end.
